

SiLi helps fighting the Corona Virus

SiLibeads Glass Beads are currently being used in the development of test equipment for real time diagnosis in respirators and in testing kits – at this very challenging time for the World.

We are not only active here, we continue to support all our markets in producing and delivering all products as usual.

Nearly two weeks ago a state of emergency was declared in Bavaria. We at SiLi reacted in time and created a corona emergency plan according to the recommendations of the WHO and RKI.

This is working well:

We would like to assure you that we are fully available for you despite the state of emergency. Please call us, send us an e-mail or make an appointment via video conference. We look forward to your message.

Stay safe!
Your Team at SiLi
